FITTING RECOMMENDATIONS

Depending on the free alternator pulley 'FAP' part number and also the application, the FAP unit can either be replaced on the car, or with the alternator removed from the vehicle on a suitable surface (such as a workbench).

The SKF FAP tools to carry out this repair are VKN 350 or VKN 351 (see last page for corresponding applications) which cover 100% of the FAP's currently in the marketplace.

To ensure a safe and professional repair - the FAP Mounting Instructions are contained in each VKN 350/351 box and in addition to this, each FAP and VKMAF kit!

FITTING RECOMMENDATIONS

In cases where the alternator needs to be removed:

- 1) Disconnect the battery and remove the right front wheel or the front panel to gain access.
- 2) Remove the accessory belt, tensioner and idler.
- 3) Remove the electrical connectors and the alternator. Place the alternator on a suitable surface (such as a workbench).
- 4) Remove the plastic cap from the FAP (if fitted).
- 5) Fit the correct insert into the FAP thread from either the VKN 350 or 351 kit.
- 6) With an impact wrench, remove the old FAP unit by using the correct insert and nut from the VKN 350 or 351 kit.

FITTING RECOMMENDATIONS

7) Install the new FAP unit and corresponding tools from the VKN 350 or 351 kit.

8) Immobilise the alternator shaft with the appropriate inserts, nuts or locking tools.

9) Tighten the FAP unit using a torque wrench, to a torque of 80 N.m.

10) Refit the plastic cap (if fitted), otherwise this could cause premature failure due to contaminants or foreign bodies entering and damaging the FAP unit.

11) Refit all of the other dismantled components.
